DETAILED ACTION

CLAIMS

Summary

Claim 13 is the independent claim under consideration in this Office Action.

Claims 14-19 are the dependent claims under consideration in this Office Action.

Claim Rejections - 35 U.S.C. § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 14-19 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Referring to claim 14, the words "are placed on top" are unclear. It is unclear if this is intended as a positive method step since it is not presented as a positive manipulative method step. Perhaps, the words "placing non-volumized as well as..." would help.

Referring to claims 15-19, the scope of the patent protection desired is unclear. There are limitations in the dependent method claims which are not presented in positive manipulative steps. Accordingly, the following words (like those noted above in claim 14): the words “are placed by” (claim 15); “the layers are formed” (claim 16); “used for” (claim 17); “are formed of” (claim 18) and “the mat is introduced” and “resins are introduced” (claim 19).

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 13-19 are rejected under 35 U.S.C. § 102(e) as being anticipated by Siebers et al. (2005/0130536).

Siebers et al. teach a mat material and a method for forming such mat material. The mat is formed of a multilayer structure (paragraph 50) where at least one layer is formed on an endless belt (paragraph 70). The layer includes glass fibers which are provided with hollow micro spheres (paragraphs 82 and 83). These are expandable and thus increase the void space between the fibers. The fibers are comprised by blown chopped fibers. The multiple layers are further bound to each other by stitches

(paragraph 219). This or another layer is deposited on the belt of the conveyor which may have depressions for molding a pattern onto the fibers (paragraph 72).

PERTINENT CITATIONS

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Loving and Rudy illustrate volumized fibers formed in layers and at least partially in a mold. Schwartz and Grimnes illustrate layered mats including twisted fibers and stitching. Harpell et al., Saughnessy and Peters et al. illustrate volumized fibers.
